

<b>Job title</b>	Software Engineer
<b>Experience</b>	>3yrs
<b>Report to</b>	CTO
<b>Company</b>	Ezyhaul Sdn. Bhd.
<b>Work Location</b>	<i>Bangsar South, Kuala Lumpur</i>

## About Ezyhaul

Ezyhaul is a rapidly growing technology company in South Asia focused on transforming the road freight industry. Our online, on-demand freight exchange platform connects shippers with pre-qualified and reliable domestic carriers who have unutilized capacity on their trucks.

Ezyhaul's vision is to transform the world of transportation logistics by building an ecosystem around shippers, transportation companies, authorities, and third-party service partners. Connected through the Internet of Things and driven by data analytics, we will empower all our partners in the ecosystem.

Headquartered in Singapore, we have successfully launched our product and services in Malaysia, Thailand, India, Philippines and United Kingdom, will be expanding operations later this year to other countries.

## Job Description

We are looking for a full stack developer with a passion for software development and who is not intimidated by new technologies. This role will require a highly skilled developer who is comfortable with both front and back end software development. Responsibilities include development and design of front-end web/mobile interfaces, architecture and development of back-end services, among other duties.

The ideal person for this role is a problem-solver with an inquisitive and innovative mind and has a strong desire to collaborate with other team members to meet and exceed business goals. If you are such an individual, we warmly welcome you to consider this position.

## Duties and Responsibilities

- Participate in requirements analysis
- Maintain and improve web applications
- Design mobile-based web features
- Work closely with the Scrum team to ensure quality throughout the entire software development cycle.
- Maintain high standards of software quality by establishing, adopting and following good practices and processes
- Monitor systems to ensure they meet both customer needs and business goals
- Solve problems by crafting software solutions using maintainable, testable and modular code
- Collaborate within a team by participating in code reviews, pairing sessions, architecture discussions and planning ceremonies

- Write robust, testable code, along with unit, functional, acceptance and/or user tests to validate every change
- Challenge your fellow team members to grow and enhance our team with new, diverse talent
- Mentor interns and other software engineers to grow their technical skills
- Work closely with the Scrum team to ensure quality throughout the entire software development cycle.
- Identify and propose dev toolsets to enhance and extend the dev team's capabilities and efficiency.
- Manage business context and pressures around quality and time to market
- Stay up-to-date on emerging technologies

## Qualifications

- 3+ years of experience in Microsoft technologies (.NET Core / Web API) – C#
- 2+years of experience working with Entity Framework and LINQ
- 1+years of experience in Angular development using Typescript
- Programming experience with different design patterns and best practices
- Hands on experience with markup languages, eg: HTML, XML
- Experience working with RESTful API services
- Experience with JavaScript and CSS3
- Experience with browser testing and debugging
- Experience in agile framework and dev cycle
- Experience in Git Repository and branching strategies
- Familiar with Azure cloud services (e.g. app service, containers, storage, etc.)
- Familiar with SOA / Micro-services architecture
- Familiar with Single Page Application (SPA) development
- Familiar with Angular Material and Angular Flex-Layout
- Positive attitude towards adopting new technologies and solutions
- Must have strong analytical and problem-solving skills
- Working knowledge with DevOps (CI/CD)
- Expert knowledge in Agile Development Methodology (Scrum) and its application to day-to-day operations
- Continuous improvement - Must be constantly growing, learning new tools and techniques, and sharing these among teams.
- Strong organizational skill with the ability to adapt to short deadlines in a fast-paced, time sensitive projects.
- Excellent verbal and written communication skills. Must be comfortable and effective communicating with individuals and teams including other stakeholders as needed.
