

<b>Job title</b>	Software QA Engineer
<b>Experience</b>	>2yrs
<b>Report to</b>	CTO
<b>Company</b>	Ezyhaul Sdn. Bhd.
<b>Work Location</b>	<i>Bangsar South, Kuala Lumpur</i>

## About Ezyhaul

Ezyhaul is a rapidly growing technology company in South Asia focused on transforming the road freight industry. Our online, on-demand freight exchange platform connects shippers with pre-qualified and reliable domestic carriers who have unutilized capacity on their trucks.

Ezyhaul's vision is to transform the world of transportation logistics by building an ecosystem around shippers, transportation companies, authorities, and third-party service partners. Connected through the Internet of Things and driven by data analytics, we will empower all our partners in the ecosystem.

Headquartered in Singapore, we have successfully launched our product and services in Malaysia, Thailand, India, Philippines and United Kingdom, will be expanding operations later this year to other countries.

## Job Description

The Software QA Engineer is an integral role in our product development team. This person will be responsible for contributing to product success through manual and automated testing, identifying and writing automated test cases, analyzing requirements, creating test plans, and tracking issues. He/she will work side by side with developers to contribute to improving overall software quality and providing recommendations for improvement opportunities.

## Duties and Responsibilities
